

# A K T I N TECHNOLOGY

*A WORLD WIDE  
PATENTED TECHNOLOGY  
FOR DRY LIPOSOMES*

*DEVELOPED BY  
CURESUPPORT*

**A**ktin Technology is the proprietary technology of a dry liposome preparation. When you use pharmaceuticals and natural supplements, you want the active ingredient to be absorbed by your body as much as possible, to experience the full benefits.

Aktin Technology is designed to give you more of what you need by improving the most crucial step in this process: absorption.

### **What are the Advantages?**

Aktin Technology combines the best aspects of two pharmaceutical forms, capsules and liposomes. We created this combination to provide you with the benefits of both pharmaceutical forms.

Benefits include:

- \* Preservative-free
- \* Easy-to-swallow capsules
- \* Increased absorption of active ingredients
- \* On-the-go products
- \* Shelf stable
- \* Easy storage
- \* No sacrifice in bioavailability

---

AKTIN™'s proprietary and global patent pending procedure makes each AKTIN™ product unique from existing supplements on the market. This cutting edge technology has been evolving for two decades and AKTIN™ is a culmination of our strives to develop a new delivery system that is effective and friendly to our body

# How do we do this?

## I.

### Smarter Packaging

Liposomes are tiny balls made of lipids and water. They are made of the same ingredients as your cells are and can unite with them.

When this happens the load of active ingredient is released into the intestinal cells and dispatched to all the cells throughout your body.

## 2.

### Smarter Delivery Method

We use a smarter delivery method called targeted delivery. This means we've designed the carriers that travel to where they need to.

Instead of just generally releasing the active ingredient in the stomach hoping the active ingredient will find its mark. As a result, much more ingredient can reach the most important area - your intestine, where absorption takes place.

3.

**How can AKTIN™ technology improve your well-being?**

Every product carrying an AKTIN™ logo is designed with your health in mind. Our primary goal is to provide you with the most effective supplements, so you receive maximum benefits and feel your best!

Some actives might be very powerful, but a lot of them maybe very poorly absorbed. To improve your well-being, AKTIN™ technology improves the absorption of these active ingredients.

In the past liquid liposomal formulations or formulations with detergent like ingredients were the only way to efficiently deliver actives to your body that were difficult to absorb.

Now, studies have shown that AKTIN™ technology's dry liposomes are better for absorption compared to ordinary capsulated counterparts.

Since AKTIN™'s products have been shown to be better absorbed, less active ingredient is wasted because of the efficient delivery system.

*50mg Oil vs 50mg Liquid liposomes vs 50mg dry Liposomes*

---

Aktin Technology™ will be applied on our liposomal capsule range and will be available world wide.
